ABSTRACT

[0024] A method for controlling a positioning device of an internal combustion engine includes the steps of: providing an electric motor for actuating the positioning device with the positioning device a torque to the; detecting a commanded applying position the positioning device; detecting sensed position of the positioning device; forming a damping term based upon the sensed position; forming a dynamic feedforward term based upon the commanded forming control action based position; and а separately upon the damping term and the dynamic feedforward term.
